

# NGXS

UGW-100

UNIDIRECTIONAL GATEWAY

## Secure by design.

Equipped with 10Gbps interfaces, permits data transfer in only one direction with out-of-the-box support for TCP and UDP transfers.

Runs a hardened OS with the Defense Information Systems Agency (DISA) Security Technical Implementation Guide (STIG) enabled.

Implements a linear assured pipeline using the SELinux National Security Agency (NSA) Reference Policy.

Role-based administration is provided in multiple languages through a custom administrative interface.

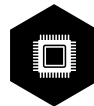

Approved by the National Security Agency (NSA), RTB Compliant and Common Criteria EAL4+ certified.

Leverages multiple compilers and XML validation engines in order to prevent a single vulnerability from compromising the device.

Validates the operating system being loaded to ensure that no malware has tampered with the boot process.

Complicates supply chain attacks by using hardware components from multiple vendors.
